

YAVUZ SELIM SEVER

Software Developer | Frontend and Full-Stack

London, UK | Yavuzslm057@gmail.com | 07444 690289 | [linkedin.com/in/yavuz-sever-12361b190](https://www.linkedin.com/in/yavuz-sever-12361b190)

PROFESSIONAL SUMMARY

Software Developer with commercial experience building production web applications and internal tools: Next.js and React frontends, Python and FastAPI REST APIs, and PostgreSQL and SQL Server data layers. Works with product owners and operations teams to turn requirements into shipped features, and maintains and improves live systems. Writes software that validates data, prevents duplicates and keeps human approval where mistakes are costly. First Class Honours Computer Science graduate (79%).

TECHNICAL SKILLS

- **Frontend:** JavaScript, React, Next.js, HTML, CSS, React Native, Shopify theme development
- **Backend and APIs:** Python, FastAPI, Node.js, REST APIs, Playwright, Java, Rust
- **Data:** PostgreSQL, SQL Server, SQL
- **Tools and practices:** Git and GitHub, Docker, PowerShell, validation and fail-closed design, duplicate protection, operator approval workflows

PROFESSIONAL EXPERIENCE

Software Developer | Dimark Limited | London, UK | May 2026 – Present

- Design, build and maintain production software, internal tools and B2B ecommerce platforms that support warehouse, labelling, supplier-order and fulfilment operations.
- Work directly with operations staff to turn requirements into frontend, backend, database and printing workflows, and to agree scope and deliverables.
- Build for reliability: validation, failure recovery and controlled operator approval, so errors are caught before they reach customers or stock.
- Maintain and extend the existing ForSaleSync platform, adding new modules (Quick Label, Nisa) to the existing codebase.

SELECTED PROJECTS

Quick Label | Warehouse Labelling and Product Tracking System

Python, FastAPI, Next.js, PostgreSQL, SQL Server, PowerShell, barcode and QR

- Built Quick Label inside the ForSaleSync platform to detect orders that need labels, match order lines to label definitions, calculate quantities and route ambiguous cases to an operator.
- Connected a FastAPI REST backend and PostgreSQL data layer to browser, mobile barcode and short-lived Windows print-agent workflows; added QR pallet records and a catalogue of 848 products across 106 brands.

Nisa Automation | Order and Invoice Processing System

Python, Playwright, FastAPI, Next.js, PostgreSQL, SQL Server, browser automation

- Built the Nisa module to extract and validate MessageBroker orders, create them through ForSale's SQL Server staging workflow, and verify each result by reading the order back.
- Developed invoice reconciliation against actual ForSale invoices, correcting unshipped lines, quantities and VAT, with fail-closed validation, duplicate protection, operator approvals and a deliberately manual final send step.

Dimark Shopify | B2B Wholesale Storefront Rebuild

Shopify, theme development, JavaScript, information architecture, UI and UX

- Rebuilt and rebranded the live B2B storefront for 2,000+ products across 850+ brands, improving catalogue navigation, product discovery, merchandising, trade pricing and responsive customer journeys.

Candy Cargo | B2B Ecommerce Storefront

Shopify, JavaScript, theme development, B2B UX, product discovery

- Built and launched a separate wholesale storefront for American confectionery, snacks and drinks, with custom discovery and merchandising components on the shared warehouse and stock operation.

EDUCATION

University of East London | BSc (Hons) Computer Science | 2023 – 2026 | London, UK

First Class Honours, overall grade 79%
