Yavuz Selim Sever

FULL-STACK DEVELOPER

London, UK | yavuzslm057@gmail.com | 07444 690289 | LinkedIn | Portfolio | GitHub

PROFESSIONAL PROFILE

Software Developer in a two-person development team at a 200-person UK wholesaler, building React and Next.js interfaces and the Python, FastAPI, PostgreSQL and SQL Server services behind them. Delivered and operated production tools spanning browser automation, geospatial data, label printing and large-file processing. First-Class Computer Science graduate seeking a full-stack developer role with a frontend focus.

TECHNICAL SKILLS

Frontend: React, Next.js, TypeScript, JavaScript, HTML, CSS, Tailwind CSS, MapLibre GL
Backend and automation: Python, FastAPI, Next.js route handlers, REST APIs, Playwright
Data and integrations: PostgreSQL, SQL Server, Shopify GraphQL, Cloudflare R2/S3
Delivery and quality: scripted deployment, GitHub pull requests, code review, user acceptance testing, Vitest (public portfolio)

PROFESSIONAL EXPERIENCE

Software Developer | Dimark Limited | London, UK **| May 2026 - Present**

One of two developers supporting a 200-person wholesale business; approximately 60% frontend, 30% backend APIs and 10% data, deployment and support.

Changes go through manager-reviewed GitHub pull requests and user acceptance testing, then ship to Raspberry Pi (ForSaleSync) and Hetzner (Dimark Portal) through custom one-command release scripts that pull, install dependencies, build, run migrations, restart services and support rollback. Production errors are recorded in log files and database records.

Live storefronts: dimarkltd.co.uk | candycargo.co.uk

- Built a Python, Playwright and FastAPI order-and-invoice workflow for shops in the Nisa retailer co-operative network. It stops at the failed stage, records the error and lets the user resume after correction; draft totals are re-read before saving and final submission remains a human decision. Reduced daily processing from about 30 minutes to 2 (operator-estimated, repeat-tested).
- Resolved inconsistent address and parcel data by building a multi-step geocoding pipeline behind a Next.js and MapLibre 2D/3D map of approximately 3,900 customers and 98,000 prospects; exact-building matches rose from 843 to 2,628, with 2,450 of 2,617 located shops linked to Land Registry parcels.
- Bridged ERP data and Windows thermal printing through React and FastAPI, designing PostgreSQL tables with foreign keys to existing product records and a claim/complete job queue. Quick Label supports a team handling 10,000-15,000 prints per day (verified from logs) and cut a 30-label run from about 10 minutes to 1-2 (operator-estimated, repeat-tested).
- Implemented the complete large-PDF workflow: upload UI and progress, API validation, background processing and polling, pdf-lib and sharp compression, Cloudflare R2 multipart upload and final download; reduced typical catalogue files from about 300 MB to 30 MB.
- Converted pre-organised data for approximately 2,500 products into a custom, print-ready 220-page catalogue; built A4 pagination, continuation pages, contents numbering, flyer and cover insertion, database-driven product overlays, per-user settings and one-click category suggestions for unassigned products.
- Extended an existing Order Processor with a FastAPI endpoint that queries Shopify through GraphQL for paid, shipped orders with removed line items and calculates VAT-inclusive refund amounts without issuing refunds automatically; exposed the results through a dedicated frontend view.

SELECTED PROJECT

Interactive Frontend Portfolio | React 19, TypeScript, Vite, GSAP, Three.js **| 2026** | Live Demo | Public Repository

- Developed four responsive interface modes from a shared geometry engine and split a large root component and stylesheet into focused hooks, components and layout modules.
- Added 28 Vitest and 23 Playwright tests across nine viewport sizes, with reduced-motion paths, inert hidden content, focus-visible styles and state-aware controls.

EDUCATION

BSc (Hons) Computer Science, First Class Honours (79%) | University of East London | 2023 - 2026
